

What is claimed is:

1. An automotive in-tank fuel hose for installation in a fuel tank, the hose comprising a single layer structure formed by at least one of (A) a thermoplastic polybutylene terephthalate elastomer containing a dimer acid moiety and (B) a thermoplastic polybutylene naphthalate elastomer containing a dimer acid moiety, the automotive in-tank fuel hose capable of following a deformation of the fuel tank and absorbing vibration caused by a fuel pump.
2. An automotive in-tank fuel hose as set forth in claim 1, wherein the dimer acid moiety is present in a proportion of 3 to 30 mol% in the thermoplastic elastomer containing the dimer acid moiety.
